Methodology and Definitions Guide – Fertilizer Week

1 Scope

This guide covers fertilizer product prices in all geographical markets and should be read in conjunction with the [CRU Group Compliance Framework and Methodology Guide](#). It details commodity-specific methodology, which has precedence, with all other aspects covered by the Group methodology guide.

2 Methodology

CRU fertilizer prices are weekly benchmarks, many of which are used extensively in physical index-linked contract settlement. Weekly pricing allows for contracting on a number of price values through the month or equally a single or average monthly value, and/or timely identification of market trends, without compromising on liquidity. Liquidity is also enhanced by a normalisation process which allows for the submission of data, which can be standardised to CRU's strict definition but is sourced from a wider array of actual trades.

Our methodology blends strict adherence to methodological rules with limited but necessary application of expert judgement, detailed below, in order to produce a price that benefits from rigour, and Price Assessor expertise and discretion in equal measure.

Data Providers

CRU price assessments are based on regular contact with a wide a network of market participants situated at critical nodes in the supply chain. This network is constantly reviewed to seek a balance of buyers and sellers that are representative of the market.

They must have access to data relating to actual spot market transactions (a purchase or a sale), bid/offer information or be able to provide a credible opinion on such prices in the absence of any other data over the relevant time period. They are therefore typically employed in sales or marketing functions on the sell side and purchasing functions on the buy side, or act in a trading function. Data Providers may also include individuals in finance functions if they can provide the same.

Each data provider is required to meet the criteria stipulated in Section 2.4 of the *CRU Group Compliance Framework and Methodology Guide*.

Data Submitted and Submission Processes

Data Providers provide CRU with transaction prices relating to sales or purchases concluded in a transaction window between 17:30 UK on Thursday of the week prior to publication and 17:30 UK on the Thursday of publication, or other price information relating to this time period. Data Providers may also include information relating to vessel size, shipment date, volume and payment terms.

Price assessors endeavour to record actual transactions and verify any deal information with both parties. Where this is not possible, verification from a third party is sought.

In the absence of actual transaction data, data providers can give firm/indicative bids or offers, and opinion of the prevailing market price in the same period.

Industry participants can submit prices to CRU by telephone, email, private one-to-one instant messenger services or other private means of communication. Information must be submitted to CRU by 17:30 UK time on Thursday if it is to be eligible for admission to the weekly fertilizer published later the same day.

Data Submission Dependency & Minimum Threshold

CRU seeks to receive market data information from a broad range of active data sources as possible and seeks to increase the number of companies willing to submit market data. In the event that a limited number of market participants are active in the market, and the market data received constitutes a significant proportion of the total data on which is the assessment is based, CRU will use expert judgement on whether to exclude, or include or defer the indication received until more information is received. This would be based on: observation of the previous price; short term historical price trends; other quantitative market data including prices in other related active markets, producer price change announcements; qualitative information

such as that received from interactions with market participants or other CRU Price Assessors, and; other sources of information relevant to the market.

CRU does not outline minimum data thresholds to determine fertilizer price assessments to avoid establishing non-representative assessments that may be deemed unrepeatable. Periods of liquidity differs across the fertilizer markets and data thresholds could result in price assessments that do not accurately reflect the market. Price assessors, instead, aim to source data from a wide range of industry participants to establish fertilizer price assessments, in line with the individual price's market data specifications, such as size, timing, loading locations etc, outlined in this methodology.

When no admissible data is received, price assessors follow the processes set out in the "Price determination in an illiquid market" section and expert judgement would be used to determine the final price value. Further details can be found under Section 2.1 of the *CRU Group Compliance Framework and Methodology Guide*.

Final Price Assessment

Final assessments are published as a price range that reflects the lowest and highest deals concluded, bids and offers placed or indicated during the transaction window, with a greater weighting given to trades made or other price information relating to activity closer to the end of this window. Final published prices are determined as a range on the basis of specific industry requirements and market conditions.

Where a mix of price types have been received, greater weighting will generally be given to transaction prices, then firm bid/offer prices, then indicative bid/offer prices, then opinions of prices in that order.

Contract prices

Contract prices are large volume transactions with prices fixed for a yearly, six months, quarterly or monthly shipping period. CRU's contract prices are adjusted once a settlement is reached. However, contract pricing may settle forward of the relevant period or be delayed owing to prolonged negotiations. In either instance, price assessments will be reflected accordingly, including retrospective adjustment following initial publication.

Normalisation

Data which meets the precise definition below is eligible for admission to the price without any transformation. Data which does not may still be eligible as an input to the price but would be subject to a normalisation process.

This can include netbacks on CFR sales based on estimated or actual freight rates, or equivalently CFR prices established on the basis of prevailing FOB prices and freights. Where seen, normalisation is usually limited to deriving FOB prices from netbacks on CFR sales, or vice versa.

Notional assessments may include the likely netback from any relevant and representative import markets or the likely 'net forward' from relevant and representative export markets based on an implied value (ie. FOB plus costs).

Decisions to normalise a price and/or choice of values used in the normalisation process are forms of expert judgement (see below).

Exclusion of outliers

A Price Assessor may use expert judgement in the exclusion of a data point as an input to the calculation of the final price. In doing so they would consider whether a trade was judged to be repeatable in the current market; whether a cargo was judged to be "distressed"; the range and distribution of data collected in the same timeframe from other data providers; previous data received from the same data provider; non-price information received from the data provider; market state and direction information from any other source. Inclusion or exclusion of input data in the final price is explicit and recorded.

Price determination in an illiquid market

In the case that there are no submissions that meet, or after normalisation can meet, the definitions below in any weekly time period, the prior week's published price may be rolled over and used as the final benchmark value for the new week.

In the case there is no transaction data (trades), firm bid/offer, indicative bid/offer and price opinion data may be used to establish a price.

However, if the overall market trend is strongly upward or downward and there were no market information, expert judgment will be used to determine the final benchmark value. If a price has moved in the absence of trades, we may explain this in the text of an accompanying “market update”.

If no trades are confirmed beyond a period of three weeks, the price will be marked with a footnote denoting “no recent business”. Should this inactivity extend beyond four to six weeks, a “no market” footnote will be ascribed to the price. Once the market becomes active again and deals are concluded, a price will be published once more.

Expert judgement

Expert judgement may apply to decisions on whether price data submitted relates to actual deals concluded; if the deal is executed at arms-length; if normalisation of price data submitted is required; the means of any normalisation, weighting of information, and the inclusion of a data point in calculation of the final price (exclusion of outliers).

Expert judgement is usually limited to establishing outliers, weighting of information, and conversion of trades reported on a delivered or CFR basis to FOB incoterms. Its use and application may be detailed in the written analysis in CRU’s Fertilizer Week.

A Price Assessor will consult with one or more colleagues before any application of expert judgement if in any doubt or where collective input would improve the quality of a judgement.

Consistency in the application of expert judgement is achieved through a combination of selection, formal and informal training and review, supervisions and control processes as detailed in section 4.5 of the *CRU Group Compliance Framework and Methodology Guide*.

Price Verification

Information from data providers and the final price assessments are captured and established in the CRU’s Prices System (CPS). The final prices are approved by another price assessor or the editor.

Final Benchmark Publication

CRU fertilizer prices are published in Fertilizer Week, via CRU Online; data feeds including APIs; and DataLab (CRU’s data delivery platform).

Weekly prices are first published on CRU Online every Thursday.

Additional Product/Market Methodology Detail

Urea

China

The spot assessments include cargoes for loading up to 60 days forward. This is due to the current inspection period of 45-75 days in order to export, and to be able to assess these important price points rather than regularly define them as No Market. Higher weighting would still be placed on prompt sales from the market if applicable.

Indonesia (prilled)

Philippines regularly pays a premium for Pusri low-biuret urea (biuret at max 0.5% for pineapple plantations vs. standard max 1.0%. Producers tend to set reserve prices (minimum acceptable) in sales tenders.

Philippines

Prices may be assessed basis Chinese/Indonesian/Malaysian FOB numbers plus freight for indicative CFR value.

Brazil

Producers regularly load vessels on speculation and sell material piecemeal to various importers while ships are en-route and/or awaiting turn to discharge. Delivered cost of prilled material may be calculated using the FSU FOB price plus freight. Middle East prices of granular urea for Brazil are often set via formulae, generally based on average of FOB Middle East plus freight as assessed on Bill of Lading date and on date of arrival in Brazil.

Black Sea

In the absence of confirmed sales and/or bids/offers, netback calculations on sales of duty-free material from Egypt are used, adjusted for duty and freight differentials. Similarly, confirmed inland sales and CFR deals for duty exempt product in key destinations such as Turkey, Italy, Spain and France are worked back, deducting costs, duty element and freight.

Calculations are also employed on confirmed sales of granular urea in Latin America and on NOLA barge values, duly adjusted for costs and quantity variances in the case of the latter.

Baltic Sea

In the absence of confirmed sales and/or bids/offers, netback calculations on sales of duty-free material from Egypt are used, adjusted for duty and freight. Similarly, confirmed inland sales and CFR deals for duty exempt product in key destinations such as UK, France, Germany and Benelux terminals are worked back, deducting costs, duty element and freight. Calculations are also employed on confirmed sales of granular urea in Latin America and on NOLA barge values, duly adjusted for costs and quantity variances in the case of the latter.

Middle East Granular (US netback)

Netback calculation based on prevailing barge values in the US, applying the following formula: $\$/\text{st FOB NOLA} - \$6/\text{st handling} * 1.1023 = \$/\text{mt CFR} - \text{actual freight} + \text{costs assessed from Middle East} = \$/\text{mt FOB Middle East}$.

Middle East Granular (all netbacks)

Is an aggregate of "US netback" and "non-US netbacks".

Iran

Values are assessed in US dollars but these are based on prices agreed in other currencies at prevailing rates.

Sanctions severely impacted trade in 2019/20. Countertrade was active with Brazil. Turkey continues imports, as do trades via China re- exports, but restrictions restrict business.

US/Canada

In the US, material is primarily shipped to distributors selling to retailers that serve growers. Business is reported by producers, importers and traders along the river system. In California and the Pacific Northwest, prices of urea tend to remain fixed through application seasons. In Canada, price lists from producers are used to set pricing plus reports from distributors and importers – prices may remain unchanged for 3-4 months between applications windows.

Loaded barges are included in the price determination process for the New Orleans assessments.

France granular

Prices are typically fixed via negotiations between co-ops/distributors and importers. Notional price may be calculated using FOB Egypt + freight + cost of discharge at average €6-8/t + miscellaneous costs at around €5= FOT breakeven.

Southeast Asia

Contract prices in Thailand and Philippines are fixed via formulae. Spot business is agreed via negotiations.

South Korea

The notional FOB price may be calculated using freight cost based on prevailing Middle East and Chinese FOB prices.

UAN

Baltic Sea

Following the EU's decision to impose anti-dumping duties on UAN entering the Union from the US, Russia and Trinidad & Tobago, the Baltic Sea price now reflects the EU dutiable value at the low end (applying the lowest duty of €27.77/t) and the duty-free netback for EU-produced UAN/Baltic long-haul UAN at the high end. Antidumping duties will be on the customs value of the product entering the EU.

US Midwest

Most product enters the region by barge or rail as 32% solution, before being distributed by the truckload usually as 28% solution.

US East Coast

Reflects trade between importers and US suppliers, plus producer price lists. Much of the UAN- 32 movement from the East Coast is destined for the Midwest, but the truck market is active at the same times of year for the local markets. Unlike the Midwest, most truck distribution is in 32% concentration, but pricing still often quoted in units of N by market players.

US Southern Plains

Reflects business concluded by distributors, plus CF Industries and Nutrien. Most product enters the region by barge or rail as 32% solution, before being distributed by the truckload usually as 28% solution.

US New Orleans

Reflects trade between importers, up-river distributors, plus producer price lists. Much of the UAN- 32 movement from the East Coast is destined for the Midwest, but the truck market is active at the same times of year for the local markets. Loaded barges are included in the price determination process for the New Orleans assessments.

France

Up to four weeks forward, except in June-August when forward prices for ‘new season’ as many as 90 days ahead may be used. Acron exports Russian product from Silimae in Estonia.

US East Coast

Reflects trade between importers and US suppliers, plus producer price lists. Much of the UAN-32 movement from the East Coast is destined for the Midwest, but the truck market is active at the same times of year for the local markets. Unlike the Midwest, most truck distribution is in 32% concentration, but pricing still often quoted in units of N by market players.

Ammonium Sulphate

US New Orleans

Values represent reports from distributors and other suppliers of spot sales to end users (retailers). Producer price lists to retailers may also be taken into account when available. Loaded barges are included in the price determination process for the New Orleans assessments.

Ammonium Nitrate

US Midwest, Southern Plains, New Orleans

Most product enters the region by barge or rail, before being distributed by the truckload. Loaded barges are included in the price determination process for the New Orleans assessments.

Brazil

The low end of the assessment is based on sales of part cargoes and/or combination shipments.

Calcium Ammonium Nitrate

Germany and Benelux

Assessments are based on posted prices by local producers Yara and OCI duly adjusted by input from importers and distributors such as key co-operatives and independent traders.

Ammonia

Middle East

In the absence of netbacks provided by market participants, prices can be derived from CFR contract prices reported by buyers and sellers in India, South Korea, Taiwan, China and China using prevailing freight rates to ascertain the FOB level. Sales to India, the Far East, West of Suez/Europe and from other supply sources may also be used for netback calculations in the absence of confirmed Middle East contract prices.

Caribbean

Price may be netted back from CFR sales ex-Trinidad and Tobago and Venezuela.

New Orleans, Midwest, Northern Plains, Southern Plains

The assessment incorporates producer price lists and reports from inland resellers. Prices do not shift as frequently as in the international market as supply is very controlled, mostly due to the logistical limitations of available barges. Prices can be

derived based on end-user sales and replacement costs basis recent US Gulf imports.

In the Midwest, Northern and Southern Plains reporting on forward offers is as important as business in the prompt market, as a vast majority of business is completed on a forward or indexed basis.

In the Southern Plains and California prices will shift in season and during fill seasons, but not as frequently as dry forms of nitrogen. Loaded barges are included in the price determination process for the New Orleans assessments.

Northwest Europe

An indicative price may be applied based on the FOB Black Sea and Baltic Sea price assessments plus freight and costs.

India

Standard formula for contract cargoes is based on Middle East FOB plus freight as published by select fertilizer market reports. Spot sales occur from time to time along with FACT tender purchases.

Far East

Long-term contracts priced via formulae to South Korea, China and Taiwan, China. Standard formula is based on Middle East/Southeast Asia FOB plus freight. In the absence of confirmed spot deals and/or pricing via formulae, an indicative price may be applied based on the FOB Middle East contract or Southeast Asia FOB price assessments plus freight and costs.

Southeast Asia

CFR mainly annual contracts based on Middle East Gulf spot/contract; spot includes regular purchase tenders by Vinachem in Vietnam, Gresik in Indonesia and Philphos in the Philippines. An indicative price may be applied based on the FOB Southeast Asia price assessment plus freight and costs.

FOB Southeast Asia – an indicative price may be applied based on the CFR Southeast Asia price assessment minus freight and costs.

US Gulf

Spot cargoes have 30-60 day lead times, routine business includes shipments from the Caribbean and the FSU.

US Tampa

The previous negotiated price stands until new monthly agreement is reached or a separate spot cargo is confirmed.

CBAM Factored Low-Emissions Ammonia

CRU's weekly CBAM Factored Low-Emissions Ammonia price is a theoretical value that calculates the carbon cost savings by European producers or importers under the EU Emissions Trading System (ETS) in 2024 and 2025 and adjusted for the introduction of the Carbon Border Adjustment Mechanism (CBAM) from 2026 onwards.

CRU will calculate the CBAM Factored Low-Emissions Ammonia price using the European Ammonia Emission Intensity of 1.95 tonnes of carbon equivalent per tonne of ammonia (t CO₂e/t NH₃), and the reported EU ETS Ammonia benchmarks, which determines the free allowance allocations to EU producers in 2024 and 2025.

Following the introduction of CBAM in 2026, the theoretical value will include an ETS allowance phase-out and replaced with the CBAM factor each year, which is the rate of reduction of the free emission allowances each year from 2026. This indicates that Europe will save on carbon costs by producing and importing low emissions ammonia over traditional grey ammonia in the 2026-2030 period.

The weekly average EU ETS emission price in euros will be supplied by EEX adjusted by the weekly average EUR/USD exchange rate supplied by the EDI.

As these markets develop CRU will regularly update our methodology to reflect updated specifications on carbon dioxide levels and EU legislation.

Phosphates

Saudi Arabia

The price assessment reflects Saudi Arabia sourced DAP via Sabic, Mosaic and Ma'aden typically on a netback on CFR sales to India, East Africa, the US and South Africa. Ma'aden and Sabic jointly market the production from the Raz-Al-Khair plant. It also

includes Wa'ad Al Shamal DAP tonnage from Ma'aden, Sabic and Mosaic.

Baltic/Black Sea

Typical cargo sizes of 3-10,000 t (Europe, incl. Turkey); 25-35,000 t (Brazil/Argentina); 30-40,000 t (India); 25-50,000 t (other Asian markets and the US). Sales are typically on an FOB basis to northwest/eastern Europe and Turkey, or based on a netback on CFR sales to Brazil/Argentina, India and the US. For MAP 11-52-0 and 12-52-0 (PhosAgro/Russia) are included and MAP 11-52-0 and 12-52-0 (EuroChem/Russia).

Morocco

Typical cargoes of 25-30,000 mt (Brazil/Argentina), usually in combination with MAP; 5-10,000 mt (western/ southern Europe); 50- 55,000 mt (India/Pakistan), 50-55,000 mt (USA). Morocco's US netback DAP/MAP price is based on the likely netback from latest New Orleans FOB price.

China

Typical cargoes of 40-60,000 t (India); 40-50,000 t (Pakistan/Bangladesh); 10-15,000 t (Vietnam). The assessments include cargoes for loading up to 60 days forward. This is due to the current inspection period of 45-75 days in order to export, and to be able to assess these important price points rather than regularly define them as No Market. Higher weighting would still be placed on prompt sales from the market if applicable.

Jordan

Typical cargoes of 20-40,000 t (India); 5-20,000 t (Turkey and Med markets).

Australia

Quantum has an exclusive contract to market DAP/MAP manufactured by Australian producer Incitec Pivot. It reflects mainly spot sales on a netback on CFR sales to the Indian Subcontinent. Export sales are seasonal, beginning around April and winding down around October, with the start of the domestic season in Australia. Contract business to New Zealand is not included in the price assessment, as formula pricing applies. As a seasonal exporter, a "no market" footnote may apply from March through October.

US New Orleans

All DAP and MAP FOB indications are based on an assumption the barge starts at the mouth of the US Gulf. Loaded barges are included in the price determination process for the New Orleans assessments.

US Midwest, Cincinnati

US is generally a black-DAP market. Other coloured product often must be discounted except in periods of very high demand. Assessments made including data from producer price lists and communications with independent distributors. In an extended absence of new business distributors' postings or fill offers for the region from producers can be used to provide indicative prices.

For MAP, business is reported by producers, distributors and retailers and covers retailers in Nebraska, northern Kansas, Missouri, Iowa, Minnesota, Iowa, Illinois and Ohio. Most DAP/MAP enters the region by barge or rail, before being distributed by the truckload or by rail. The colour of MAP is not critical.

US California/US Northwest

DAP and MAP in the state generally sell at the same price (assuming 11-52-0 MAP), therefore MAP quotes in California can be used to indicate DAP values.

US Southern Plains

The Southern Plains granular DAP/MAP price assessments provide an overall range for product sold in Arkansas, southern Kansas, Oklahoma and Texas. Fertilizer Week also provides a subset within the region, defined as "Tulsa." This price line is limited to business reported from the Oklahoma terminals at Inola, Catoosa, Muskogee and Webbers Falls.

Argentina/Uruguay

If there is enough trading activity in neighbouring Brazil, the price point may be assessed at a premium to the MAP CFR Brazil price assessment by incorporating the freight differential, which typically varies from \$5-10/t depending on the number of discharge ports.

China EXW, 11-44

Most orders are place before the two major buying seasons in spring and autumn begin. Distributors also build the stock in off season when the price is close to the bottom of the market or they replenish their stock during the buying season. Prices and

settlement method are adjusted according to the market situation. In most actual cases, producers will quote a delivered price to the railway station at buyer's location. Deducting railway freight rate gives the netback ex-factory price.

MAP 11-44 mainly reflects sales by the largest Chinese producers, eg. YTH, Kailin, Wengfu, Yihua and New Yangfeng either directly or via traders. Sales typically based on a netback on CFR sales to Brazil, Australia, India or Southeast Asia.

Since NPK plants are major buyers of MAP in China, orders are placed before the two major buying seasons in spring and autumn begin. NPK producers also build the stock in summer for top dressing of maize or replenish their stock during the buying season.

Brazil

Typically, cargoes from Phos-Agro/Russia, EuroChem/Russia); Granular MAP 11-52-0, (typically OCP/Morocco, Mosaic/ US, GCT/Tunisia, MPC/Saudi Arabia, Fertinal/Mexico, Foskor/South Africa, IPL/Australia, Various/China). In the absence of bids or offers, the price may be assessed based on the MAP FOB Baltic/Black Sea price.

TSP

Morocco

OCP sales are typically made on an FOB basis to western Europe or based on a netback on CFR sales to Brazil, Bangladesh or the US.

Tunisia

Price assessment reflects Tunisian producer GCT sales typically on a FOB basis to western Europe or based on a netback on CFR sales to Brazil or Bangladesh.

China

Typical cargoes are 25-30,000 t (Iran); 25-30,000 t (Brazil); 10-20,000 t (Sri Lanka). 5,000 t is minimum size for assessment. The assessments include cargoes for loading up to 60 days forward. This is due to the current inspection period of 45-75 days in order to export, and to be able to assess these important price points rather than regularly define them as No Market. Higher weighting would still be placed on prompt sales from the market if applicable.

Brazil

Key TSP importers including Mosaic, Fertipar, Yara, ADM and Heringer, If no bids or offers reported, it is to be assessed based on the MAP CFR Brazil price at a discount, which varies between \$80-120/t depending on trading.

Phosphoric Acid

Phosphoric acid prices may be change retrospectively after contracts are agreed with prices backdated to the official start date of a quarterly or half-yearly contract. The previous assessment stands until a new contract price is agreed.

North Africa

Typical cargos are 25-30,000 t solution (16-18,000 t P2O5 based on 53.5% average ratio) for India and 5-10,000 t 53.5% solution for Europe. 5,000 t 53.5% solution is minimum size for assessment. Sales by OCP and Tunisian producer GCT's sales typically on a CFR basis to India, Brazil and western Europe.

Brazil

Typical cargoes 5-10,000 t 54% solution. 5,000 t 53% solution is minimum size for assessment. The assessment reflects quarterly contracts and spot sales on a CFR basis with buyers (mainly animal feed producers such as DSM/Tortuga).

India

Typical cargo 25-30,000 t solution (16-18,000 t P2O5 based on 53% average ratio). 5,000 t 53% solution is minimum size for assessment. The price assessment reflects quarterly contracts on a CFR basis with buyers IFFCO, PPL, CIL, ZIL, MCFL, GSFC, DFCL, FACT and TCL.

Northwest Europe

Typical cargo of 5-10,000 t 53% solution on average. 5,000 t 53% solution is minimum size for assessment. The price assessment reflects quarterly contracts on a CFR basis with buyers Phosphea; Prayon, Belgium (50/50 joint venture between the Walloon government and OCP); Yara, Belgium; Rosier, Belgium and others. The assessment comprises four price points, the spot phosphoric acid price, the fertilizer-grade contract price, the feed-grade contract price and the technical/food grade contract price.

Phosphate Rock

Phosphate rock contract prices for Morocco and Jordan may be changed retrospectively after contracts are agreed with prices backdated to the official start date of a quarterly or half-yearly contract. The previous assessment stands until a new contract price is agreed.

Morocco

Price reflects Moroccan producer OCP's sales typically on a CFR basis to India, and on an FOB basis to some markets. The prior quarter's price stands until a new price is agreed.

Algeria

Price reflects sales typically on a CFR and FOB basis to India and other markets. The prior quarter's price stands until a new price is agreed.

Jordan

Price reflects Jordanian producer JPMC sales typically on an FOB basis to India, and to other markets such as Indonesia and Brazil. The prior quarter's price stands until a new price is agreed.

Egypt

Price reflects trader sales typically on a CFR basis to India and other markets. Sales are often led by Egyptian export arm EMPHCO. The prior quarter's price stands until a new price is agreed.

Peru

Price reflects sales typically on a CFR and FOB basis to India and other markets. The prior quarter's price stands until a new price is agreed.

India

Price reflects sales by multiple suppliers typically on a CFR basis to a number of importers. The prior quarter's price stands until a new price is agreed.

SSP

Brazil

Price reflects sales of domestic producers on a CPT basis at Rondonopolis, the country's main distribution centre.

NPKs

Baltic Sea

When no confirmed sales are reported, delivered values in China and Thailand may be used for netback calculations (15-15- 15 and 16- 16-16). For 10-26-26, when no confirmed sales are reported, delivered values in India are used for netback calculations.

Morocco

For 12-46-0-7, if no bids or offers are reported, the price is to be assessed based on a discount from the MAP FOB Morocco price assessment.

For 15-15-15, typical cargoes of 10-20,000 t (Europe/Brazil), 30,000 t (West Africa). 5,000 t is minimum size for assessment. If no bids or offers are reported, it is to be assessed based on the NPK FOB Baltic Sea 15-15-15 price assessment.

China, Southeast Asia, India

For 10-26-26, the price is derived from reported sales by producers such as Acron and PhosAgro. For 20-20-0- 13 into India, prices are derived from reported sales by producers such as Petrokimia Gresik, Acron and PhosAgro.

For China 15-15-15 EXW prices, most orders are placed before the two major buying seasons in spring and autumn start. Distributors also build the stock in off season when prices are near a floor or replenish their stock during the buying season. Prices and settlement method are adjusted by market situation. In most cases, producers will quote a delivered price to the railway station at buyer' location deducting the railway freight rate, to give a netback the ex-factory price.

Brazil

For 12-46-0-7, prices are derived from reported sales by OCP into the Brazilian market to buyers such as Fertipar, Heringer and Yara. If no bids or offers are reported, it is to be assessed based on the MAP CFR Brazil price assessment.

West Africa

If no bids or offers are reported, it is to be assessed based on NPK Morocco 15-15-15 assessment.

Potash

Vancouver

Price for standard MOP is assessed by calculating the netback against CFR sales to key consumer markets India, China and Southeast Asia. Granular MOP price is assessed by calculating the netback against CFR sales to key consumer markets Brazil and Southeast Asia.

Jordan/Israel

Price (standard MOP) assessed by calculating the netback against CFR sales to key consumer markets India, China and Southeast Asia.

Baltic Sea

Price for standard MOP assessed by calculating the netback against CFR sales to key consumer markets India, China and Southeast Asia. Baltic granular assessed by calculating the netback against CFR sales to key consumer markets Brazil and Southeast Asia.

China

Price announced by suppliers and buyers for seaborne shipments made during the specified contract period. The price reflects Chinese importers' purchases on a CFR basis. One of the main suppliers to conclude a contract announces a price which becomes the new contract price benchmark for the period with other producers typically although not always following suit in supplying Chinese importers at the same price level. Contract price remains in place as the weekly assessment until a new price is settled even if the supply period has ended.

India

India's import contract prices are announced by an international supplier, with others typically although not always following suit in supplying Indian importers at the same price during the specified contract period. Contract price remains in place as the weekly assessment until a new price is settled even if the supply period has ended.

Southeast Asia

Spot price assessment for standard MOP includes prices in Malaysia, Indonesia, Vietnam and Thailand.

China/Russia

Price reflects the sales of Uralkali by rail on a DAP basis from Russia to China via the inland port of Manzhouli. Main players are Chinese cross-border MOP importers, especially Suifenhe Longsheng, Sinofert and CNAMPGC. Assessment may also incorporate cross-border rail shipments made by EuroChem.

New Orleans

The price can be derived from US Midwest and Southern Plains markets in the absence of new spot business, but only when the upper Mississippi River system is open. Loaded barges are included in the price determination process for the New Orleans assessments.

US Midwest, US South

Most product enters the region by barge or rail, before being distributed by the truckload. Confirmed FOB New Orleans barge quotes and/or Midwest FOB prices can be used to derive the delivered barge price.

SOP

NW Europe

Price largely reflects spot and short-term contract sales concluded by key suppliers K+S and Tessenderlo on FCA basis, with other suppliers following suit.

Sulphur

Vancouver

Price assessment includes netbacks on spot sales on a CFR basis from key producers and marketing firms such as Shell, Petrosul and Husky to all overseas destinations, though primarily into China (key ports of Nantong and Qingdao) and Brazil (key ports of Paranagua, Rio Grande and Santos).

Middle East

Assessment excludes Iran. Spot sales are mostly granular, though sometimes crushed-lump which secures a lower price and not used to reflect main-stream sulphur prices but may be used to establish low-end. Price series launched June 2003.

Quarterly contracts concluded between main suppliers in region including KPC (Kuwait), Adnoc (UAE) and phosphate buyers such as OCP and GCT in North Africa and international traders. The prior quarter's price stands until new price is agreed.

Adnoc monthly contract is a benchmark Middle East price issued on a monthly basis by UAE's Adnoc. Primarily a contract price for consumers in India but is used as a key indicator for other markets and seen as a yardstick for market sentiment. Prior month's price stands until new price is agreed.

Tasweer posts its price publicly and there is no negotiation. Prior month's price stands until new price agreed.

China

Delivered product into China. One of the most watched sulphur price points as very fluid and seen as a key benchmark of the international sulphur market. Assessment includes crushed lump since the end of 2013 due to an anticipated increase in crushed product sold into China from 2014.

India

Indian importers are main driver of this price point – another fluid price – which stems primarily from tenders issued by major phosphate producers. If tenders' results are unclear, assessment can in part be assessed by adding freight component and other related costs to the Middle East FOB benchmark. The price assessment is independent from the Adnoc monthly contract price benchmark.

Brazil

Primarily material from the Middle East, FSU, and US Gulf.

Tampa

Prior quarter's price stands until new price agreed.

Northwest Europe

The contract covers mainly inland road deliveries. Based on contracts between major sellers and leading buyers. Prior quarter's price stands until new price agreed.

Benelux

Contract covers mainly inland Rhine river and rail deliveries. Prior quarter's price stands until new price agreed.

Sulphuric Acid

Northwest Europe

For spot acid supplies out of Europe, including to Brazil and US Gulf, the CFR price largely reflects business concluded by major European producers with European consumers. Prior quarter's price stands until new price agreed.

Turkey

Price reflects spot and contract business largely concluded by Aurubis.

US Gulf

Price reflects spot business concluded by traders and producers for shipments to the US Gulf, typically on European origin.

Brazil

Price assessment reflects spot business to Brazilian consumers. Typically of European origin, but also from Far East and elsewhere.

Chile

Price reflects business carried out by key suppliers to the country. Mostly of Far East origin.

Contract price reflects annual contract established between key acid suppliers and Chilean consumers for leaching operations in Chile.

CRU Fertilizer Affordability and Crop Indicators

CRU's Global Agriculture Indicators is a set of fifteen price indices that are derived from CRU's weekly urea, phosphates, potash, sulphur prices – published in CRU's *Fertilizer Week Service* – and weekly crop price indicators for wheat, soybean, corn, and rice provided by the International Grain Council (IGC).

The indices will be a single weekly figure and are weighted by annual trading volumes. These indicators are published every week on Friday by 12pm UK, except on UK public holidays. In case of a lack or lag in receiving IGC's crop prices, CRU will endeavour to update at the earliest available period.

This series includes:

Fertilizer Affordability Indicator	Urea Affordability Indicator	DAP Affordability Indicator
Potash Affordability Indicator	Sulphur Affordability Indicator	IGC/CRU Crop Price Indicator
IGC/CRU Wheat Price Indicator	IGC/CRU Corn Price Indicator	IGC/CRU Soyabean Price Indicator
IGC/CRU Rice Price Indicator	Fertilizer Price Indicator	Urea Price Indicator
DAP Price Indicator	Potash Price Indicator	Sulphur Price Indicator

UREA PRILLED – FOB

Baltic Sea

DataLab name:	Urea, Prilled Bulk, Spot price; Baltic Sea, FOB
Grade:	Urea - prilled - 46%. 90% 1-4 mm
Incoterm:	FOB
Credit/payment terms:	Pre-payment or sight LC
Packaging:	Bulk
Loading location:	Ventspils, St. Petersburg, Riga, Klaipeda, Muuga, Kotka
Type:	Spot
Consumer markets:	Worldwide
Currency:	US dollar
Weight unit:	Metric tonne
Size:	2,000 t up to 45,000 t
Timing:	Prompt business up to six weeks forward
Key supply sources:	Russia, Belarus, Lithuania, (Estonia if Nitrofert returns)
Duties/tariffs:	No export taxes. EU and Turkey charge 6.5% on all imports from Russia
Background:	Price series launched April 1999

Indonesia

DataLab name:	Urea, Prilled Bulk, Spot price; Indonesia, FOB
Grade:	Urea - prilled - 46% N. 90% 1-4 mm
Incoterm:	FOB
Credit/payment terms:	Sight LC
Packaging:	Bulk
Loading location:	Kaltim/Bontang, Pusri/Palembang and Gresik/Gresik. Kujang offers prills in bags
markets:	Regional markets and Indian Subcontinent
Type:	Spot, via sales tenders conducted by Pusri Holdings (Persero)
Currency:	US dollar
Weight unit:	Metric tonne
Size:	5,000 t to 20,000 t
Timing:	Prompt business up to four weeks forward
Key supply sources:	PIM, Pusri and Gresik (Gresik is bagged urea as is Kujang)
Duties/tariffs:	Duty at the prevailing rate
Background:	Price series launched April 1987

China

DataLab name:	Urea, Prilled Bulk, Spot price; China, FOB
Grade:	Urea - prilled - 46% N. 90% 1-4 mm
Incoterm:	FOB
Credit/payment terms:	Sight LC
Packaging:	Bulk
Loading location:	Various
Type:	Spot
Currency:	US dollar
Weight unit:	Metric tonne
Size:	5,000 t to 50,000 t
Timing:	Prompt business up to six weeks forward
Key supply sources:	CNAMPGC, Sinofert, Sinochem, Sinopec and direct producers
Duties/tariffs:	No export tax in 2019. EU duty: 6.5%. US duty for 2019 applies, but is subject to change
Background:	Price series launched November 2000
Frequency:	Weekly

UREA PRILLED EXW

China

DataLab name:	Urea, Prilled Bagged, Spot price; China, North, EXW
Grade:	Prilled urea 46-0-0
Incoterm:	EXW
Credit/payment terms:	Cash payment or acceptance bill
Packaging:	50kg/bag, sometimes 1 tonne/bag
Loading location:	Northern China including Shandong, Shanxi, Hebei, Henan
Type:	Spot
Currency:	Renminbi
Weight unit:	Metric tonne
Size:	100 t or more
Timing:	Prompt business within one week
Key supply sources:	Producers in Northern China
Duties/tariffs:	Not applicable
Background:	Price series launched January 2008
Frequency:	Weekly

UREA PRILLED CFR

Southeast Asia

DataLab name:	Urea, Liquid Bulk, Spot price; Asia, Southeast, CFR
Grade:	Urea - prilled - 46% N. 90% 1-4 mm
Incoterm:	CFR
Credit/payment terms:	Sight LC or prepayment. Credit sometime requested
Packaging:	Bulk
Delivery location:	All main Vietnamese and Philippine ports
Type:	Spot
Currency:	US dollar
Weight unit:	Metric tonne
Size:	5,000 t to 50,000 t
Timing:	Prompt business up to six weeks forward
Key supply sources:	Middle East, China, Indonesia, Malaysia and Brunei
Duties/tariffs:	Duty at prevailing rate
Background:	Price series launched July 2022

UREA PRILLED/GRANULAR CFR

India

DataLab name:	Urea, Prilled/Granular Bulk, Spot price; India, CFR
Grade:	Urea – prilled/granular - 46% N. 90% 1-4
Incoterm:	CFR
Credit/payment terms:	Sight LC
Packaging:	Bulk
Delivery location:	East and West Coast Indian ports
Type:	Spot. Price assessed against public tenders and spot sales for industrial use
Currency:	US dollar
Weight unit:	Metric tonne
Size:	25,000 t to 70,000 t
Timing:	Prompt business up to six weeks forward
Key supply sources:	Middle East, China, FSU, Iran, Indonesia, Malaysia and Egypt. Iran excluded in 2019, but Iranian urea transhipped via China still features
Duties/tariffs:	At prevailing rates
Background:	Price series launched May 2006

UREA GRANULAR FOB

Black Sea

DataLab name:	Urea, Granular Bulk, Spot price; Black Sea, FOB
Grade:	Urea - Granular - 46% N. 90% 2-4 mm
Incoterm:	FOB
Credit/payment terms:	Pre-payment or sight LC
Packaging:	Bulk
Loading location:	Yuzhnyy, Tuapse, Nikolaev, Kavkaz anchorage, Poti
Type:	Spot
Currency:	US dollar
Weight unit:	Metric tonne
Size:	3,000 t to 45,000 t
Timing:	Prompt business up to six weeks forward
Consumer Markets:	Worldwide with emphasis on southern Europe, the Americas and India
Key supply sources:	Russia, Azerbaijan and Turkmenistan
Duties/tariffs:	No export taxes. EU and Turkey charge 6.5% on imports from FSU. Ukraine duty is 4.7%
Background:	Price series launched November 2012

Baltic Sea

DataLab name:	Urea, Granular Bulk, Spot price; Baltic Sea, FOB
Grade:	Urea - Granular - 46% N. 90% 2-4 mm
Incoterm:	FOB
Credit/payment terms:	Pre-payment, sight LC
Packaging:	Bulk
Loading location:	Klaipeda, Ust Luga and Kotka
Consumer markets:	Worldwide, but emphasis on northwest Europe and Americas.
Type:	Spot
Currency:	US dollar
Weight unit:	Metric tonne
Size:	2,000 t to 35,000 t
Timing:	Prompt business up to six weeks forward
Key supply sources:	Russia and Belarus
Duties/tariffs:	No export taxes. EU plus Turkey charge 6.5% on imports from Russia and Belarus
Background:	Price series launched November 2012

Middle East (US netback)

DataLab name:	Urea, Granular Bulk, Spot price; Middle East (USA netbacks), FOB
Grade:	Urea - granular - 46% N. 90% 2-4 mm
Incoterm:	FOB
Credit/payment terms:	Sight LC or CAD
Packaging:	Bulk
Loading location:	Mesaieed/Qatar, Jubail/Saudi Arabia, Sitra/Bahrain, Ruwais/UAE, Sohar/Oman
Type:	Spot
Currency:	US dollar
Weight unit:	Metric tonne
Size:	25,000 t to 50,000 t
Timing:	Prompt business up to six weeks forward
Key supply sources:	Qafco/QatarEnergy, Sabic, PIC/GPIC, ADNOC and SIUCI
Duties/tariffs:	At prevailing rates
Background:	Price series launched November 2012

Middle East (non-US netback)

DataLab name:	Urea, Granular Bulk, Spot price; Middle East, FOB
Grade:	Urea - granular - 46% N. 90% 2-4 mm
Incoterm:	FOB
Credit/payment terms:	Sight LC or CAD
Packaging:	Bulk
Loading location:	Mesaieed/Qatar, Jubail/Saudi Arabia, Shuaiba/Kuwait, Sitra/Bahrain, Ruwais/UAE,

Type:	Sohar/Oman. Iran excluded from the assessment
Currency:	Spot
Weight unit:	US dollar
Size:	Metric tonne
Timing:	10,000 t to 50,000 t
Key supply sources:	Prompt business up to six weeks forward
Duties/tariffs:	Qafco, Sabic, PIC/GPIC, Fertil and SIUCI. OMIFCO/Oman output is delivered exclusively to India under JV contract
Background:	No export tax. Pays 6.5% duty to EU
	Price series launched November 2012

Middle East (all netbacks)

DataLab name:	Urea, Granular Bulk, Spot price; Middle East (all netbacks), FOB
Grade:	Urea - granular - 46% N. 90% 2-4 mm
Incoterm:	FOB
Credit/payment terms:	Sight LC or CAD
Packaging:	Bulk
Loading location:	Mesaieed/Qatar, Jubail/Saudi Arabia, Shuaiba/Kuwait, Sitra/Bahrain, Ruwais/UAE, Sohar/ Oman. Iran excluded
Type:	Spot
Currency:	US dollar
Weight unit:	Metric tonne
Size:	10,000 t up to 50,000 t
Timing:	Prompt business up to six weeks forward
Key supply sources:	Qafco, Sabic, PIC/GPIC, Fertil and SIUCI. OMIFCO/Oman output is delivered exclusively to India under JV contract
Duties/tariffs:	No export tax. Pays 6.5% duty into EU
Background:	Price series launched April 1999

Iran

DataLab name:	Urea, Granular Bulk, Spot price; Iran, FOB
Grade:	Urea - granular - 46% N. 90% 2-4 mm
Incoterm:	FOB

US Gulf

DataLab name: Sulphuric Acid, Bulk, Spot price; USA, Gulf Coast, CFR
Grade: Liquid acid 98%
Incoterm: CFR
Credit/payment terms: Cash/sight payment
Loading location: Europe into Tampa
Type: Spot
Currency: US dollar
Weight unit: Metric tonne
Size: 20,000 t minimum
Timing: 30 days forward
Key supply sources: Europe and Canada
Duties/tariffs: At prevailing rates
Background: Price series launched December 2008

Brazil

DataLab name: Sulphuric Acid, Bulk, Spot price; Brazil, CFR
Grade: Liquid acid 98%
Incoterm: CFR
Credit/payment terms: Cash/sight payment
Delivery location: Paranagua, Rio Grande and Santos
Type: Spot
Currency: US dollar
Weight unit: Metric tonne
Size: 12,000 t to 20,000 t
Timing: 30 days forward
Key supply sources: Germany, Scandinavia, Spain, Bulgaria, Mexico
Duties/tariffs: Duty at prevailing rate
Background: Price series launched April 2003

India

DataLab name: Sulphuric Acid, Bulk, Spot price; India, CFR
Grade: Liquid acid 98%
Incoterm: CFR
Credit/payment terms: Cash/sight payment
Delivery location: Paradip, Tuticorin, Vizag, Kakinada
Type: Spot
Currency: US dollar
Weight unit: Metric tonne
Size: 18,000 t to 20,000 t
Timing: 30 days forward
Key supply sources: Japan, South Korea, China
Duties/tariffs: At prevailing rates
Background: Price series launched November 2015

Chile

DataLab name: Sulphuric Acid, Bulk, Spot price; Chile, CFR
Grade: Liquid acid 98%
Incoterm: CFR
Credit/payment terms: Cash/sight payment
Delivery location: Mejillones
Type: Spot
Currency: US dollar
Weight unit: Metric tonne
Size: 20,000 t to 30,000 t
Timing: 30 days forward
Key supply sources: Japan, South Korea, China
Duties/tariffs: At prevailing rates
Background: Price series launched December 2008

Chile Contract

DataLab name:	Sulphuric Acid, Bulk, Contract price; Chile, CFR
Grade:	Liquid acid 98%
Incoterm:	CFR
Credit/payment terms:	Sight/cash
Delivery location:	Mejillones
Type:	Contract
Currency:	US dollar
Weight unit:	Metric tonne
Size:	20,000 t to 30,000 t
